DETAILED ACTION

The following is an examiner's statement of reasons for allowance: The present invention is directed to a miniature in the canal hearing device with a remote magnetic activator.

Independent claims 1, 15, 21 and 33 identify the uniquely distinct feature of a miniature magnetically controlled latchable reed switch with a latching magnet affixed to one of the reeds or lead wires for control of the device using an externally applied magnet field located outside the ear canal or physically disengaged with the hearing device and utilizing multiple orientations of the magnetic control device for different operations of the reed switch. The closest prior art, Epley (US 4756312) teaches a hearing device with a latching reed switch and a magnetic actuator which must be placed adjacent to the reed switch in the ear canal for activation; Grad (5811896) teaches a glass encapsulated reed switch with a fixed biasing magnet; Ribic (US 5359321) teaches an external magnet operator for a hearing device which generates a pulse to trigger an electronic switching device; and Newton (US 5659621) teaches an external magnetic actuator for a hearing device which operates a reed switch to change parameters based on the amount of time it is near the reed switch. The prior art fails to anticipate or render the independent claims obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
